

Carizma at a glance

Carizma is a suite of modules that work seamlessly together as a single application. It's an easy to use, web-based system that supports users in all phases of the licensing process, from managing business opportunities to managing related contracts to calculating royalties – in an easy, concise and secure manner.

Carizma includes a powerful document management module to manage the whole document lifecycle, including template management, automated generation of documents and folder structures, check-in and check-out, versioning and approval workflows. Optionally, Carizma uses Documentum® or SharePoint as a backend to store documents and to enforce retention policies.

Documents and emails that are not created within Carizma itself are easily loaded into Carizma using drag & drop. Access to consistent, in-depth information is available with just a few clicks of a mouse.

Licensing process in Carizma

Carizma supports users in every phase of the licensing process – easy, concise and secure.

Pre-contractual phase

Request to obtain or offer intellectual property (IP) from/to external partners

Assessments
